
Igor_com : Sour docs:

12-28-2013.. GoDaddy cPanel Cloud DNS. (click).Q: Is it possible to make the [gamedev.stackexchange.com] redirect to [stackoverflow.com/gamedev]? Possible Duplicate: Suggesting a migration - it should be redirected to SO. The stackoverflow.com/gamedev page does not seem useful. If it would redirect people over to stackoverflow.com, it'd be more useful to people coming from the Area 51 proposal page. Of course, it'd be just as useful to people who have encountered problems with the gamedev tag here. A: Not exactly no. There's been a history of it being shown to potential users, which is why some people might actually decide to use it, and Stack Overflow / Gaming tends to get more traffic, generally. So, with this in mind, it's really just a question of whether it should be changed. I think that it should, as an ideal, but you'll have to ask someone more powerful than me. Raised Absence of Coenzyme Q10 Associated with Recurrent Vestibular Migraine Attacks. CoQ10 has recently been reported to be associated with vestibular migraine, but the relationship between CoQ10 and migraine has not been studied in patients with vestibular migraine. We measured the levels of CoQ10 in 48 patients with typical vestibular migraine and compared them with those of 37 patients without migraine. CoQ10 levels were lower in the peripheral blood mononuclear cells of patients with vestibular migraine with painful paroxysms (vM-Pain) than in those without any pain (vM-No Pain) or with migrainous headache (migraine). Among the patients with vM-Pain, CoQ10 levels were significantly lower in the 17 who had 3 or more attacks per year compared to the 3 with 6 or fewer attacks per year, indicating that the frequency of attacks is negatively correlated with CoQ10 levels. Patients who had higher CoQ10 levels demonstrated better brain stem auditory-evoked response latencies and P300 peak latencies, indicating that CoQ10 levels can determine the severity of brain stem dysfunction associated with vestibular migraine attacks. A significantly higher level of CoQ10 was observed in the
