Computer-aided design involves the use of various tools, such as the ability to rotate and zoom objects on a screen and select or modify objects in a drawing. With AutoCAD, a user may also interact with an object by measuring its dimensions, tracing a drawing, or setting up a property for a specific purpose. AutoCAD is primarily used for the construction and architectural design of buildings, including the design of the building shell, interior, mechanical systems, and electrical systems. Other common uses are automotive and plumbing design. To create an AutoCAD drawing, a user begins by specifying the start and end points for the object, setting up a coordinate system, and specifying other drawing properties, such as the units for measurements, the rotation angle for the coordinate axes, and the layer on which to draw. AutoCAD supports the concept of 2D perspective views of a 3D space. The user can create and modify these views and can specify multiple viewpoints. Software Description User Guide This manual is for AutoCAD's AutoCAD LT 2017 and 2017 SP1. This is a work in progress. When editing the User Guide or when there are changes to the Manual, a new version will appear in the Downloads section. Please check this page if you are not sure if the user guide is current. AutoCAD 2017 is fully documented, but this is not the case for AutoCAD LT 2017 and AutoCAD LT 2017 SP1. This section provides the links to the manual you can download. Users can create and modify the drawing, model the objects, add objects, connect objects together, rotate objects, and view the objects in the context of the drawing. An AutoCAD drawing is a collection of objects in a specific space, and the user can add and modify the objects to create the model of the space. A drawing includes three types of objects: entities, geometric objects, and annotations. Entities include such items as text, polygons, hatch patterns, and other graphic objects. These objects can be modified by the user to create the model of the space. Geometric objects represent three-dimensional objects. Annotations can be used to store text or graphics. There are multiple views of the drawing. The user can select views by clicking on the View ribbon tabs (Views, View List, and Views Options) to switch between views. The user can save the views of the drawing as a template, which allows the user to save the

Q: How to get contacts from Facebook in iOS? How to get contacts from Facebook using Apple iOS SDK? Like getting friends list from Facebook, and then filtering them. A: You can use this simple code to get all facebook contacts of your device: NSMutableDictionary *favUsers = [self.facebook friendsForUser:@"user_ID_GOES_HERE"]; NSLog(@"%@@", favUsers); When you want to filter contacts of friends of your facebook user_ID_GOES_HERE, just write the filter in the following code: NSMutableArray *favContacts = [self.facebook friendsMatchingFilter:@"user_ID_GOES_HERE"]; NSLog(@"%@@", favContacts); And you are done! A: Just try to get the phone contacts for example and filter. The Digital Realities: Walking The Line Between Advocacy And Anti-Advocacy By Jim Brown How do we handle the various pressures of social media? And what about the varying levels of public engagement? There are times when one must advocate and times when one must protest. Facebook and Twitter allow us to be less discriminate. We should be at the end of the book where we are at the beginning of the book, the place where we have completed the map and are on the way to the destination. We are not at the end of the book yet. Are we at a point where we need to tear out our digital devices and toss them into the river? I ask this because I have to constantly be worried about the level of visibility and visibility of my advocacy. How do I balance it, do I want it to be all out, all the time, do I want the number of followers to go up or is that my decision to make? I have a preference for under the radar, out of the way, quiet, often times slower ways of getting out the word. I don't want to have a following. I don't want to be labeled as an activist. I have heard that before and it doesn't sound very satisfying to me. I am over against the over-exposure that is in social media. Anti-advocacy, there are

After you import feedback, changes appear in your drawing with a line of blue markers to show that they are changes. You can edit the changes in a drawing, add them to the original drawing, or discard them to get back to the original. Markup Assist: When you begin to work on a drawing, you can right-click to mark a selected area in your drawing as a feedback location. When you import a feedback location into your drawing, it will be updated to a paper-quality version. You can draw, insert, and export feedback at paper quality, so you can send a piece of paper to a print shop for printing, then take a snapshot of that feedback in your drawing. New templates for Microsoft Excel and Google Docs: Create and send technical documents in Excel or Google Docs directly from your CAD drawing. Send Feedback in Paper View or Digital View: Send feedback in any view of the drawing. You can send feedback from Paper View or Digital View to a browser. Lines of Blue: When you import feedback, you can select a line type of the feedback. In your drawing, you can select the line to make it a different color or texture. Enhanced Printing: Print to two printing destinations with the Print dialog box. Add the Snap tool to the F key: Press F2 to add the Snap tool to the F key. Now you can use F4 to snap to any object. Enhanced Rounding: Added the F4 round tool to the F4 key. Now you can use F4 to round any object. Basic 3D modeling: Importing.dwg (or.dxf) files Editors will show the files in their native file format when they import the drawing. Drag-and-drop to combine parts from multiple files. Copy-and-paste the editor view in your drawing. Camera panel: Press Shift+CMD+I to open the camera panel. You can set the view to flat, top, or isometric. You can also copy and paste your camera position from the Camera panel to your drawing. Viewport manipulators: The Viewport Manipulators have been moved to the Graphics menu (View | Manipulators).
