Invento also developed Utopia, which is a similar visual package that is free and open source. Utopia is a visual authoring environment for rapid development of user interfaces. Invento offers a free license for ObjectARX that can be extended to the commercial licensing of the application. The licensing allows the application to be used internally, and the license includes technical support. Figure 3.11 shows the typical properties found within ObjectARX. In addition, it includes the following visualizations: a simple layout of 2D objects, a 2D graph, and a 2D topology. **Figure 3.11** ObjectARX interface properties AutoLISP is a programming language used to create functions and macros. It is installed with AutoCAD, and many functions can be accessed through the Interactive Menu. The application includes Visual Studio and a command line interface. This allows access to many functions via the command line and command line tools. AutoLISP is the easiest method to extend the functionality of the software. Visual LISP (VSL) is used to extend AutoCAD from the command line. This type of programming language enables the creation of functions, macros, and commands to be executed from within AutoCAD.
